ABSTRACT

The present invention is a system including a color coating system, a communication network, and a paint
5 manufacture data management system.

According to this system, a paint manufacturer and a color coating company exchange necessary information for paint manufacture, such as an object for coating, coating conditions, paint, and color, via the
10 communication network by the color coating system and the paint manufacture data management system so that a color paint matching an image of a color concept proposed by the color coating company is manufactured.
